

Lecture 14: Change of Variables Part 2

October 11, 2018

Review: Change of Variables Formula

ksuweb.kennesaw.edu

If $J = \frac{\partial x}{\partial u} \frac{\partial y}{\partial v} - \frac{\partial x}{\partial v} \frac{\partial y}{\partial u} \neq 0$,

$$\iint_R f(x, y) dy dx = \iint_S f[g(u, v), h(u, v)] |J| dv du$$

A Bunch of Examples

Examples:

- (1) $T^{-1} : u = xy, v = xy^2$. Evaluate $\iint_R y^2 dA$ where R is bounded by the curves $xy = 1, xy = 2, xy^2 = 1, xy^2 = 2$.
- (2) $T : x = u/v, y = v$. Evaluate $\iint_R xy dA$ where R is the region in the first quadrant bounded by $y = x, y = 3x, xy = 1, xy = 3$.
- (3) $T^{-1} : u = 2x - y, v = x + y$. Evaluate $\iint_R 6x - 3y dA$ where R is the region bounded by $2x - y = 1, x + y = 1, 2x - y = 3, x + y = 3$.
- (4) $T^{-1} : u = y - x, v = y + x$. Evaluate $\iint_R xy dA$ where R is a square with vertices at $(0, 1), (1, 1), (2, 0), (1, -1)$.

Polar Coordinates

researchgate.net

Polar coordinates is just a specific type of transformation where

$$T : x = r \cos \theta, y = r \sin \theta$$

Then the Jacobean is found by

$$M = \begin{bmatrix} \frac{\partial x}{\partial u} & \frac{\partial x}{\partial v} \\ \frac{\partial y}{\partial u} & \frac{\partial y}{\partial v} \end{bmatrix} = \begin{bmatrix} \cos \theta & -r \sin \theta \\ \sin \theta & r \cos \theta \end{bmatrix} \text{ giving } J = |M| = r \cos^2 \theta + r \sin^2 \theta = r$$

Polar Coordinates

Examples:

(a) Evaluate $\iint_R e^{x^2+y^2} dy dx$ where R is the unit circle.

(b) Evaluate $\int_{-\infty}^{\infty} e^{-x^2/2} dx$.

Triple Integrals & Change of Variables

T now maps region S in the (u, v, w) space onto R in the (x, y, z) space via

$$T : x = g(u, v, w), y = h(u, v, w), z = k(u, v, w)$$

This gives a Jacobean of

$$J = |M| = \begin{vmatrix} \frac{\partial x}{\partial u} & \frac{\partial x}{\partial v} & \frac{\partial x}{\partial w} \\ \frac{\partial y}{\partial u} & \frac{\partial y}{\partial v} & \frac{\partial y}{\partial w} \\ \frac{\partial z}{\partial u} & \frac{\partial z}{\partial v} & \frac{\partial z}{\partial w} \end{vmatrix}$$

And the follow change of variables formula

$$\iiint_R f(x, y, z) dV = \iiint_S f(g(u, v, w), h(u, v, w), k(u, v, w)) |J| du dv dw$$
